

A CLINICAL RESEARCH STUDY TO HELP PREVENT BLOOD CLOTS

COULD YOUR CHILD TAKE PART?

The ENNOBLE-ATE Study is looking at an investigational medication for children and young people who are at risk of having blood clots.

The investigational medication is already approved for the treatment or prevention of blood clots in adults.

We are looking for children and young people who:

- are between the ages of birth and 17 years
- have a heart problem that places them at risk of blood clots
- will require preventative treatment for blood clots for about 3 months.

Questions? Please contact a member of the study team today.
